# INCOPOS
Property Management System

MANAGE YOUR BOOKINGS EASLY

The IncoPOS property management system combines bookings, scheduling, seasonal packages, POS and warehouse software all in one. Flexible and functional, the system adapts to the specific needs of various types and sizes of hotel chains and restaurants. It is designed for both holiday resorts and business hotels. The interface is intuitive, user-friendly and easy to operate, ensuring fast and pleasant service to hotel guests, even in big hotels with high occupancy and customer flow.

01 IncoPOS

Works on Windows, Linux, and macOS with minimum system requirements. IncoPOS comes with competitive prices. Clients can choose between MySQL, MS SQL or SQLite databases. Also, provides direct support for over 240 devices.

02 POS & Inventory

Multi-functional POS and stock control solutions, compatible with all Android touch terminals, tablets and smartphones. Complete restaurant integration, sales reports, recipes, and billing transfer to the guest's room

03 IncoCloud

Centralized management of stores, workstations, documents, users, and reports. Instant backup and database synchronization in a few seconds. Accessible anytime, anywhere and on any device. Secure and hosted on a high availability data center.

It's time to stop the Clock's arrows. Move forward with IncoPOS

Why choose IncoPOS for your hotel business

What is our simple solution

The hotel management system features an intuitive interface and a range of functions. The system offers detailed room descriptions, supports individual and group bookings, flexible pricing options and personal templates for confirmations, invoices and bills.

The system supports setting up a graphical hotel layout and simplifies the transfer of bills from the restaurant to the guest rooms, giving an advantage for streamlining hotel management. The staff can define access levels and process multiple reservations at once.

Easy to use, configure and administer

IncoPOS is a complete hotel management system and seamless integration with ESTI. IncoCloud synchronizes reservations between multiple hotels. Our software offers API integration with external booking systems (Booking.com, Hotels.com, etc.), ensuring security and faster and easier guest service.

Easy to use and fully functional

IncoPOS features a customizable interface for faster and more productive work in the hotel restaurant. IncoPOS is a flexible solution for real-time sales and inventory control with expense tracking, seamless integration with peripherals, and document creation capabilities in multiple languages and currencies.
